CheckAm

Forward a suspicious message. CheckAm tells you if it's a scam, and why.

Open Agent Hackathon 2026
Track 02: The Agent That Can Explain Why
Best use of NVIDIA Nemotron

David Okoro · Enugu, Nigeria · solo builder
github.com/Okorodavid/checkam (MIT) · Telegram @checkamoutbot

My mum nearly paid a fake loan fee

“Your OPay loan of ₦150,000 is approved. Pay a processing fee of ₦5,000 to unlock it.”

She nearly paid.

Fake loans, fake jobs, Ponzi “investments”, fake bank alerts and phishing links reach millions of Nigerians.

Who gets hit most

- Parents
- Traders
- First-time phone users

They have no one to ask. When they do ask, they often ask the scammer’s “customer care”.

Forward it to CheckAm. Get a verdict with reasons.

1 Forward

Telegram WhatsApp Discord

Any message, link or account number

2 It checks

Checking…

Shows up at once, while it investigates

3 It replies

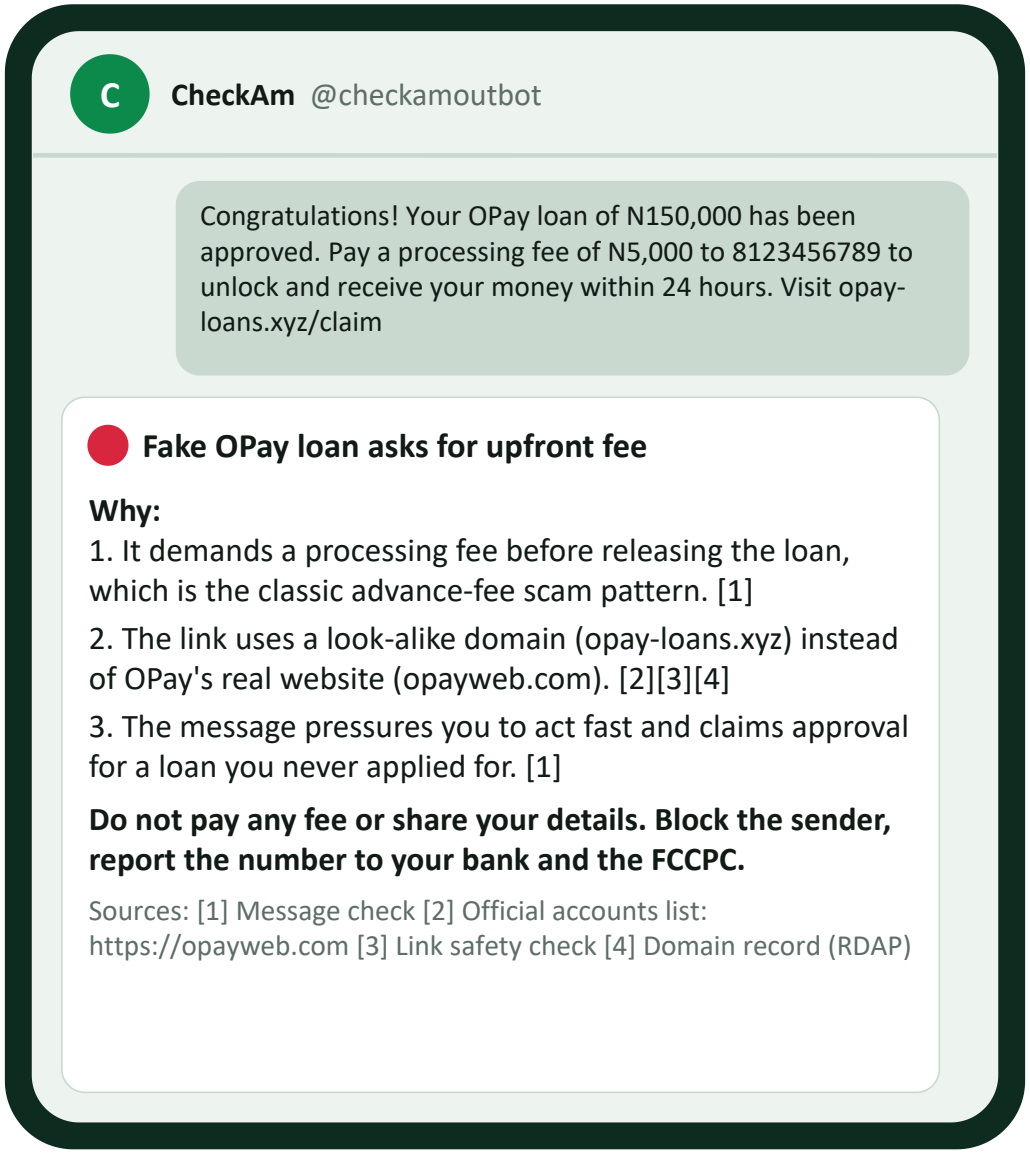

- A verdict
- 2–4 reasons, each numbered to its source
- What to do now

Scam **Likely scam** **Not sure** **Looks genuine**

Replies in the language you wrote in, including Nigerian Pidgin

In groups, it stays quiet unless something looks like a scam

A real reply from a live run on Nemotron 3 Ultra

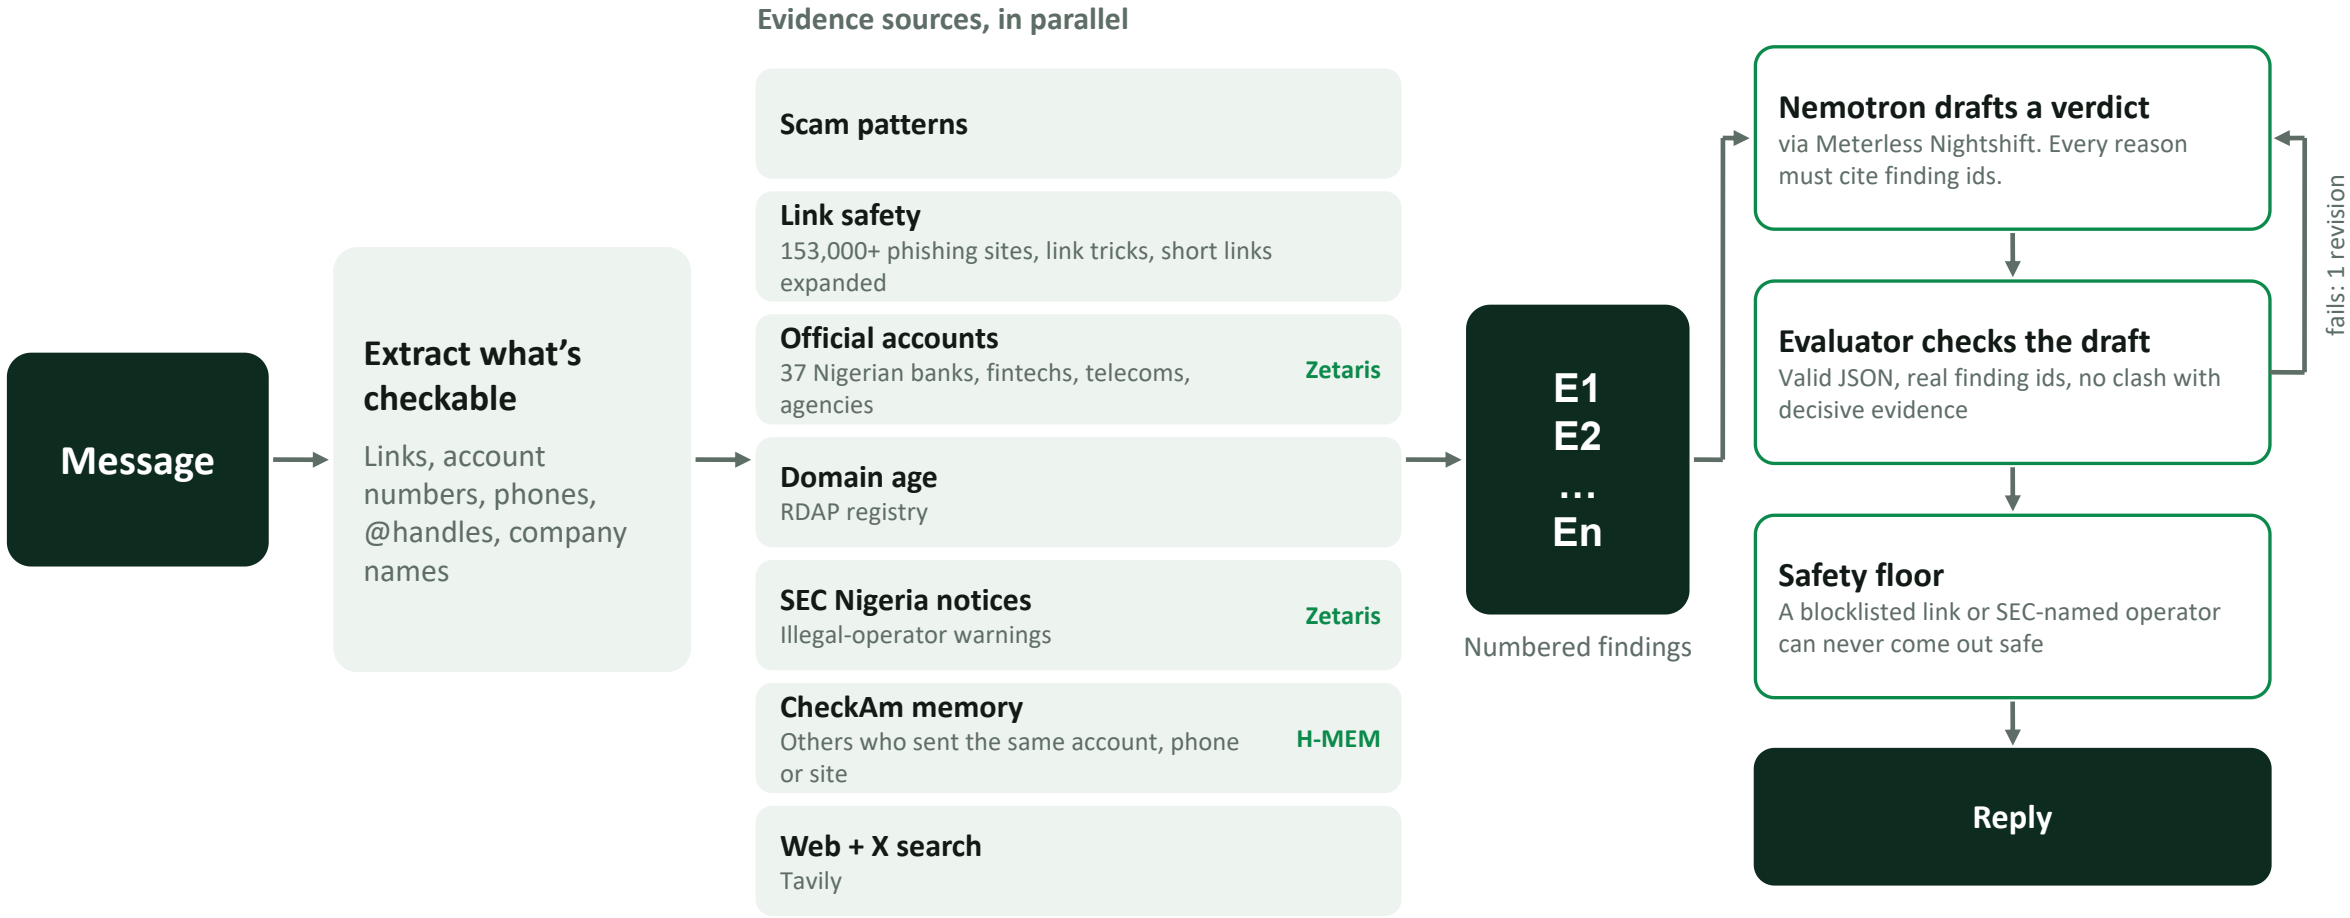

Asked in Pidgin, it answers in Pidgin

NNPC recruitment fee na scam

1. Real NNPC recruitment no dey ask for any registration fee.
2. The link nnpc-recruitment-portal.online no be NNPC real website, their real site na nnpcgroup.com.

- Verdict first, in one line
- Every reason numbered to its source
- Then what to do now

How the agent works

Fallbacks: Nightshift → NVIDIA API → Gemini → offline rules. **Agent trace:** every step logged, including which model handled the request.

Zetaris holds the facts behind every verdict

Public JSON in the repo

Official accounts, regulator warnings and rules, SEC operator names from sec.gov.ng

→

Lightning REST tables

Each JSON file registered in Zetaris

→

Flattened into views

```
checkam.official_accounts
checkam.regulator_warnings
checkam.regulator_rules
checkam.sec_notices
```

→

Loaded with SQL

Over Zetaris's REST API when the bot starts

37

organisations' official sites and X accounts

32

SEC-named operators extracted from sec.gov.ng

4

views CheckAm reads

Zetaris facts first, web data (RDAP, blocklists, Tavily) for context. Without Zetaris, sample mode loads the same JSON locally.

Meterless runs the model and the memory

Nightshift: the AI provider

- OpenAI-compatible Runtime, bearer token, meterless-app header
- Model discovery picks a Nemotron-backed route
- The NVIDIA key lives in Nightshift's Providers tab, not in the app

Engine H-MEM: shared memory

- Each check stores the account numbers, phones, sites and handles scammers reuse. Never the message text.
- Later checks find them with H-MEM's hybrid scoring
- 13/13 H-MEM conformance checks pass (Python port), plus a two-session test

Enugu
Someone reports a scam account

H-MEM

Kano, the next day
Same account sent in, warned at once

The model connects evidence. It can’t invent it.

NVIDIA Nemotron

Connects the findings into one verdict and writes it in English or Pidgin.

Reasons without valid evidence ids are dropped. The evaluator sends weak drafts back.

Zetaris

Holds the facts that ground every “this isn’t the real company” reason.

Official accounts, SEC warnings and regulator rules, queried with SQL.

Meterless H-MEM

Turns single checks into shared community memory.

Without storing anyone’s messages: only reused accounts, phones, sites and handles.

Safety floor: a blocklisted link or an SEC-named operator can never come out “safe”, whatever the model says.

Technical stack and privacy

Channels	Telegram, WhatsApp (Cloud API webhook), Discord
Model	NVIDIA Nemotron 3 Ultra (550B) via NVIDIA API; Nemotron 3.5 Lightning (30B) lane in Nightshift
AI provider	Meterless Nightshift, then NVIDIA API, Gemini, offline rules
Data layer	Zetaris: Lightning REST tables, views, SQL over REST
Memory	Meterless Engine H-MEM, stored in SQLite
Web evidence	Phishing Army, OpenPhish, RDAP, sec.gov.ng, Tavily
Code	Python, httpx, aiohttp, python-telegram-bot, discord.py. MIT licence.

Privacy

- Message text is never stored
- Users stored as salted hashes
- Never asks for PINs or OTPs
- Never fetches links into private networks
- Fair-use limit per person and a daily cap

What it said in live tests

OPay loan fee message	Scam	Fee before the loan, look-alike link
CBEX investment pitch	Scam	Cited SEC Nigeria’s own warning page
Blocklisted phishing link	Scam	Found on two blocklists
Real GTBank message	Looks genuine	Its link is GTBank's real website (gtbank.com)
NNPC job message in Pidgin	Scam	Replied in Pidgin

51
offline tests

7
evidence sources per check

153,000+
known phishing sites

What’s next

Read screenshots and voice notes
That’s how most scams get forwarded

Full FCCPC loan-app register and CBN licence lists
As more Zetaris tables

A public WhatsApp number
Anyone in Nigeria can save it

Partnerships with banks and fintechs
Their customers are the ones being impersonated
